

# Build and Rebuild, LLC

## Custom Designed Energy Efficient Home

10

Driveway & landscaping added digitally.

### ABOUT THE PROJECT

This custom residence transforms a once neglected lot into a refined expression of contemporary family living. Framed by clean geometry and expansive windows, the home invites natural light deep into its open, flowing interior. A stunning kitchen forms the heart of the plan, complemented by a grand entryway, beautiful outdoor room, and a primary suite designed for quiet retreat. Site work included the removal of an existing structure, and integration of a rain garden to sustainably manage stormwater. Every element from building envelope detailing to curated interior finishes was developed in close collaboration with the homeowners to balance beauty, functionality, and the sense of comfort and belonging that truly defines home. The result feels both tailored and timeless, purposefully integrated into its neighborhood with enduring craftsmanship and elegant design.

### ABOUT BUILD & REBUILD, LLC

Co-owners Abel Thomason and John Redente bring a shared commitment to craftsmanship, integrity, and timeless design to every project. Abel was born into the carpentry trade and developed his skillset working alongside a generation of master carpenters who taught him the art of quality homebuilding. He refined those skills for two decades as the head of Thomason Brothers Carpentry. John, an Army Veteran and accomplished carpenter, brings a commitment to excellence and operational efficiency that dovetails with Abel's artistry and craftsmanship. Together they lead Build & Rebuild—"Build" for custom new homes, and "Rebuild" for renovations and additions. Our focus is simple:

**if something is worth doing, it's worth doing right.**

We believe that lasting quality starts long before construction begins with detailed planning, strong relationships, and a deep investment in turning your vision into a reality.
